Macro Bin
48 Series

The 48 Series bins are the world's largest fixed-wall, high-pressure, injection-molded bin, replacing 4x4x4 foot metal, corrugated, or wood containers. Used for food processing applications and storage, the smooth, nonporous surfaces of these bins help to reduce the potential for cross contamination.

Features
- Rounded corners and smooth surfaces mean fewer scuffs, abrasions, and cuts on your product. Risk of contamination is reduced because there are fewer places for unwanted particles to hide.
- FDA-approved materials are certified safe for use with food products, eliminating many HACCP problems associated with wood bins.
- Injection-molded, high impact resistant plastic stands up to heavy day-to-day use. The one-piece design eliminates the problem of product getting trapped between the side walls and base.
- Nonporous surfaces won't absorb water or dehydrate your product like wood bins, and they provide a constant tare weight throughout their use.
- Easy to sanitize MacroBins keep cleaning costs to a minimum. A high-pressure wash removes most debris; a nonabrasive brush can dislodge any remaining items.
- Lightweight construction reduces shipping costs and makes MacroBins easier to move; the direct load corner posts and interlocking foot design make them safer to stack — up to 5 high.
- Splinter-resistant plastic eliminates contamination problems associated with wood chunks, paint chips, or metal fragments. Bin repair is inexpensive with hot air welding.
